

# Pressure Washer Tips

## Pressure Washer Tips

1. **DO NOT** allow your washer to run for extended periods when you are not actually washing. This will overheat and damage your pressure washer. Simply shut the motor off whenever you lay your gun down.
2. **NEVER** rinse off your pressure washer using the pressure washer gun. To clean your unit, wipe it with a damp sponge using a mild detergent. The motor inside is not waterproof.
3. **NEVER** expose your unit to freezing temperatures. The pump always retains some water inside which will freeze and damage your pressure washer.

### Packout Check List

- |  |       |
|--|-------|
| 1. Unit has been cleaned.                                | _____ |
